Benefit

Wood is very commonly used in woodworking for **indoor and outdoor flooring**, as well for furniture production. Well-made and maintained exterior decking and siding made from strong and durable wood **can last up to 50 years**. Ipe is also commonly used in the creation of **stairs or stair handrails**.

Wood is known to be **very dependable and durable**. Visually it has a very pleasing look, with colors ranging from reddish brown to sometimes a bit brighter hues with darker or lighter stripping. It is rated as one of the best types of wood that is naturally resistant to fires, with same "Class A" rating that steel and concrete get. It ages very gracefully, with insects, rot and UV damage not appearing at all during first 20 to 30 years of outdoor use.
